

**Physical Rehabilitation in Critically Ill Children: A Multicenter Point Prevalence  
Study in the United States**

**Supplementary Digital Content – Table of Contents**

Supplemental Digital Content (in order of presentation in text)

1. Additional Methodology for Statistical Analysis
2. Map of Participating PICU sites
3. Demographics of the 82 Participating PICUs
4. Study Flowchart
5. Proportion of Patients with PT and/or OT consultation request by Day 3 of PICU admission, by Baseline Pediatric Cerebral Performance Category
6. Patient Baseline Characteristics, separated by PT and OT-provided mobility
7. Patient Clinical Characteristics, separated by PT and OT-provided mobility
8. Multivariable Adjusted Odds Ratios for PT and/or OT-provided mobility (primary outcome), with separate analyses for PT and OT.
9. Univariate and Multivariable Adjusted Odds Ratios for Out-of-Bed Mobility
10. Frequency of Reported Barriers to Mobilization

### **SDC 1. Additional Details for Statistical Analysis**

We performed regression diagnostics including checks for collinearity of covariates and linear association of log-odds of outcomes with continuous variables. PICU LOS was log-transformed because it had a skewed distribution. After log-transformation, this variable had a U-shaped association with the study outcomes; thus, linear splines were included in the model at 100 days for therapist-provided mobility and at 10 days for out-of-bed mobility. We explored for statistical interaction of age with all covariates on the outcome of out-of-bed mobility. We included interaction terms if significant in the multivariable regression model at  $P<0.05$ , and presented adjusted odds ratios (aORs) within two age strata: <3 or  $\geq 3$  years old. Missing data represented <2% for all variables in our primary analyses; therefore, we performed complete case analysis.

**SDC 2. Map of Participating PICU sites**

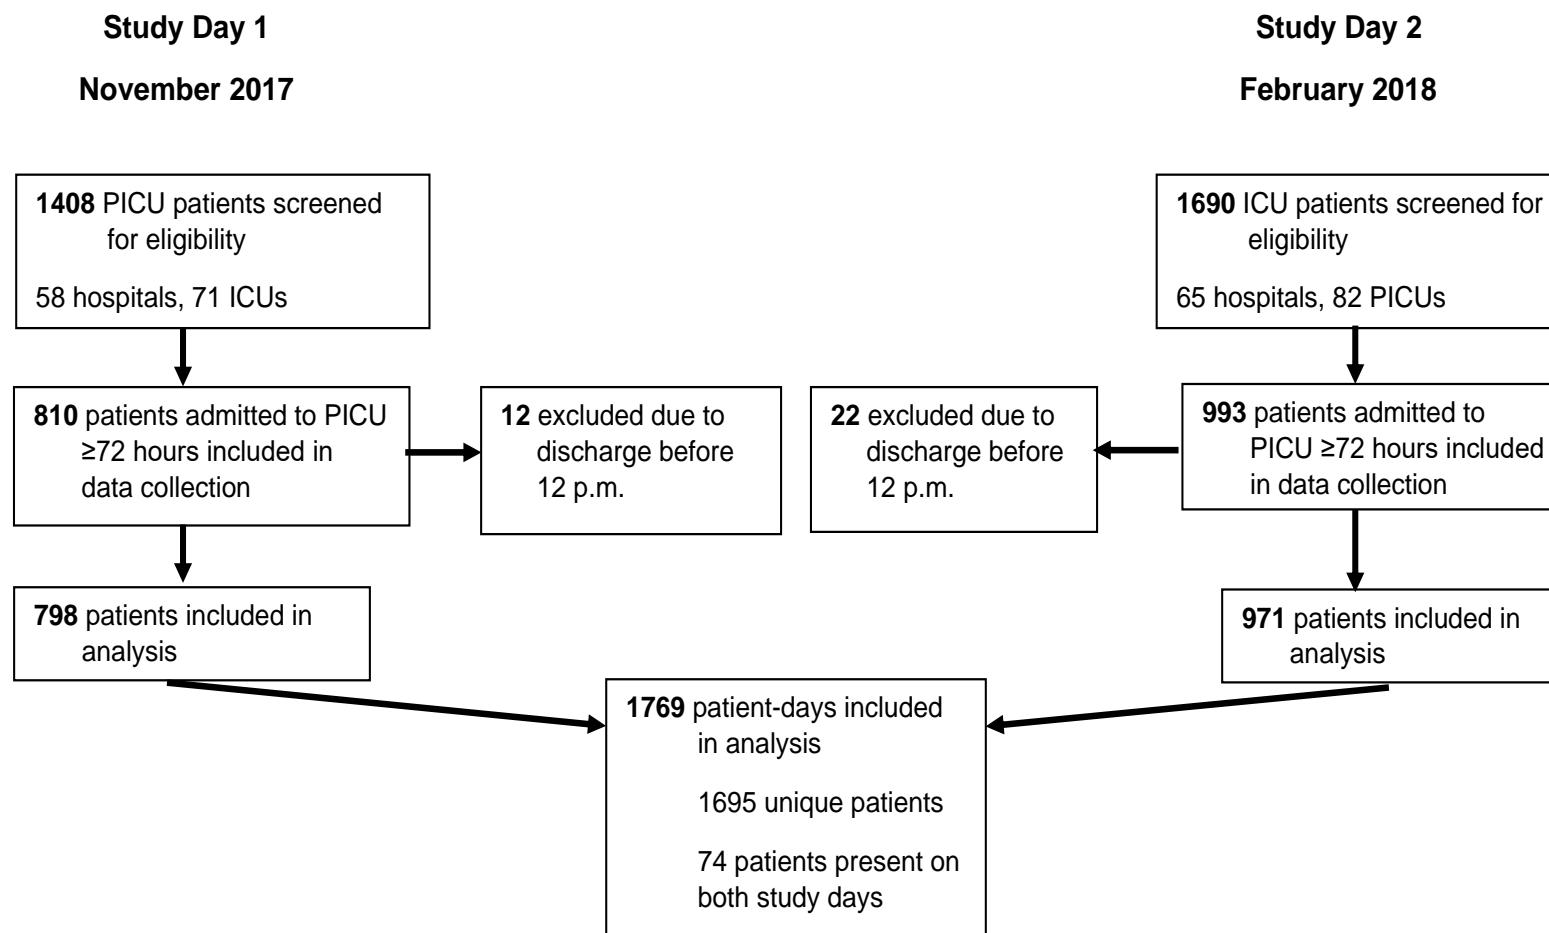

Each marker represents one hospital. N=49 hospitals with 1 participating ICU; N=15 hospitals with 2 participating ICUs; N=1 hospital with 3 participating ICUs

**SDC 3. Demographics of the 82 Participating PICUs**

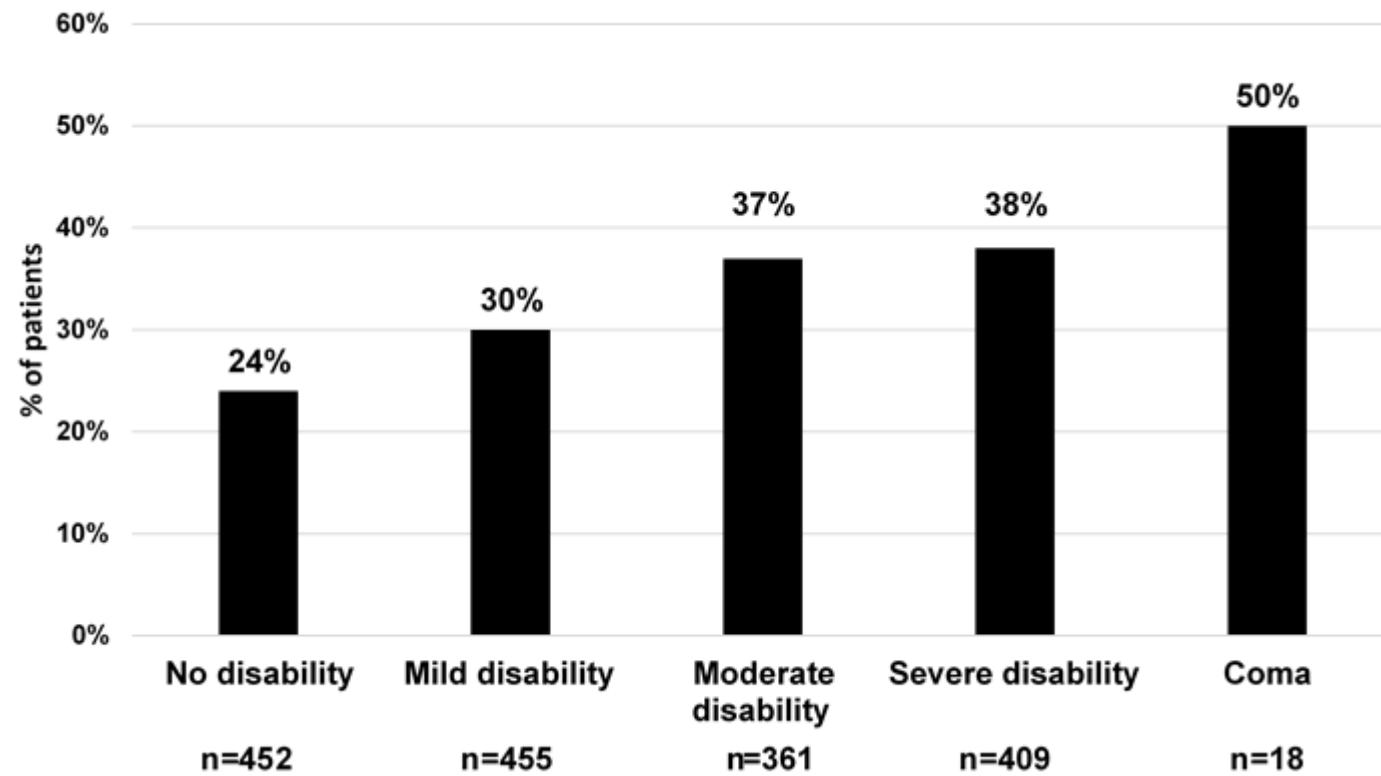

<b>Characteristic</b>	<b>Value N=82</b>	<b># of patients (%) N=1769</b>
Number of PICU beds, median (IQR)	24 (16 - 30)	na
Academic teaching hospital, n (%)	75 (92)	1653 (93)
Free-standing children's hospital, n (%)	45 (55)	1212 (69)
Type of PICU, n (%)		
Medical-surgical with cardiac	36 (44)	777 (44)
Medical-surgical without cardiac	33 (40)	678 (38)
Cardiac only	13 (16)	374 (18)
All single-patient rooms, n (%)	58 (71)	1207 (68)
Early mobility protocol, n (%)	22 (27)	468 (27)
% dedicated FTE for PICU (IQR)		
Physical therapy	0.3 (0-0.7)	na
Occupational therapy	0.2 (0-0.5)	na

IQR, Interquartile range; PICU, pediatric intensive care unit; FTE, full-time equivalent

## SDC 4. Study Flow Chart

<b>Characteristic</b>	<b>Crude OR (95%CI)<sup>a</sup></b>	<b>P-value</b>	<b>aOR (95% CI)<sup>b</sup></b>	<b>P-value</b>
Chest tube	0.26 (0.18-0.38)	<0.001	0.49 (0.26-0.91)	0.01
Hemodialysis catheter	0.26 (0.15-0.47)	<0.001	0.30 (0.15-0.63)	0.001
Intracranial pressure monitor	0.79 (0.44-1.44)	0.44	0.56 (0.24-1.30)	0.18
Unit mobility guideline/protocol	1.60 (1.17-2.28)	0.003	1.73 (1.14-2.6)	0.01
Family presence <sup>d</sup>				
Age <3 years	3.93 (2.9-5.34)	<0.001	4.55 (3.13-6.6)	<0.001
Age ≥ 3 years	2.03 (1.35-3.06)	0.001	1.62 (0.98-2.7)	0.06
PT-OT involvement on study day <sup>e</sup>				
Age<3 years	1.92 (1.46-2.52)	<0.001	1.43 (1.0-2.0)	0.045
Age≥3 years	2.61 (1.87-3.65)	<0.001	3.1 (2.01-4.79)	<0.001

Abbreviations: aOR, adjusted odds ratio; HHFNC, heated high-flow nasal cannula; mech vent, mechanical ventilation; OR, odds ratio; PCPC, Pediatric Cerebral Performance Category; RAM, RAM cannula.

<sup>a</sup>Crude estimates include random effect for site and no adjustment for any covariate.

<sup>b</sup>Adjusted estimate includes random effect for site, in addition to adjustment for admission reason and ethnicity and all variables listed in the table.

<sup>c</sup>Any vasoactive infusion, excluding milrinone.

<sup>d</sup>Interaction term for family presence by age strata in crude model ( $P=0.005$ ) and adjusted model ( $P=0.001$ ).

<sup>e</sup>Interaction term for PT-OT involvement by age strata in crude model ( $P=0.16$ ) and adjusted model ( $P=0.005$ ).

<b>SDC 10. Frequency of Reported Barriers to Mobilization</b>	
<b>Barrier</b>	<b>No. (%)</b>
Medical contraindication*	154 (9)
Circulation/heart*	154 (9)
Too sedated*	147 (8)
Isolation precautions*	106 (6)
Pain*	91 (5)
No physician order*	89 (5)
Previously immobile*	74 (4)
Post-op restriction*	67 (4)
Patient not on unit*	52 (3)
Bleeding risk*	52 (3)
Mechanical ventilation	47 (3)
Acquired neuromuscular weakness*	45 (3)
Presence of medical device*	40 (2)
Contraindication from patient*	40 (2)
Extracorporeal membrane oxygenation*	35 (2)
Large catheter*	34 (2)
Unable to schedule session	31 (2)
Agitation	29 (2)
No nursing available*	26 (2)
No therapist available*	25 (1)
Delirium*	23 (1)
Terminal stage*	20 (1)
Chemical paralysis	20 (1)
Desaturates with activity	19 (1)
Contraindication from parent*	17 (1)
Intracranial pressure monitor	17 (1)
Critical airway	14 (1)
Bedrest orders	12 (1)
Lack of equipment*	11 (1)

\*Pre-specified option for survey item “If there were mobilization barriers, please select all the barriers to mobilization.”
